

Introduction

The materials of practicing Scenar–therapists and the research assistants are included in the present collection. These materials were given on the 7-th international scientific–practical conference, regional seminars; made on the personal initiative during the research work with the support of Joint-Stock Company OKB “Ritm”.

The article of J.Z.Gringer devoted to the comparative research of treatment methods within the information approach.

The original hypothesis is offered and checked up in the work of S.A.Chebkasov. M.G.Makletsova carried out interesting researches with co-authors and A.V.Tarakanova with co-authors. The works, described above, are executed within the cooperation with Joint-Stock Company OKB “Ritm”.

I.V.Semikatova's article gives the beginners (and not only the beginners) the recommendations for the work with difficult patients. It is possible to examine G.V.Subbotina's work in the same aspect.

The most part of the articles is devoted to the application of Scenar-THERAPY in concrete situations-it is a treatment of rheumatoid arthritis (N.F.Aleksandrina, S.V.Alyoshin), pulmonary complications (P.P.Ljashedko, neurodermatitis and atopic dermatitis (N.A.Loisko, A.A.Lebedenko), epileptic syndrome (E.N. Kuptsova), eye diseases (N.V. Kachevanskaja with the co-author, A.B.Vasiljeva), work with sportsmen (A.B. Trembach, N.G.Lipskaja).

M.Zheleva and A.M.Krasilnikov with co-authors describe, besides, the development of Scenar-CENTRES in Bulgaria and Udmurtiya.

Nonprofessionals (not doctors) may achieve the impressing results, and the work of L.A.Trishina (the ecologist) is the evidence to that.

The articles of the collection are intended for practicing Scenar-THERAPISTS and research assistants.
